

Quorum

*AI agents that run post-merger integration
for mid-market acquirers.*

When two companies merge, the brains of the new organization assemble themselves. Each functional area gets an agent that decides; humans approve. The committee persists.

STAGE

Pre-Seed

FOUNDED

2026

HEADQUARTERS

San Francisco

CATEGORY

B2B Enterprise AI

— QUAESTIO · DISPUTATIO · DECISIO

THE CONFERENCE ROOM TAX

Integration is the most expensive room in M&A.

\$2–5M

Consulting fees for a single mid-market post-merger integration. Hundreds of cross-functional decisions, billed by the hour.

12–18mo

Typical timeline to reconcile two companies' systems, contracts, comp bands, and operating processes.

The work itself is reconciliation.

Which ERP do we keep. Which vendor contracts survive. How comp bands align. Which R&D programs continue. Each decision touches multiple functions, runs on incomplete information, and absorbs senior leadership attention for months.

Today this work is done by humans in conference rooms, supported by spreadsheets and PowerPoints, advised by consultants charging Big Four rates. The output is a decision log. The process is the cost.

A STANDING COMMITTEE, IN SOFTWARE

Replace the conference room with a committee of agents.

Each functional area gets an AI brain. It holds that function's priorities. It operates on proprietary analytical tooling. It makes judgments on behalf of the function.

Agents convene quorums. They reconcile every process and system decision in the integration — which to retire, which to preserve, which to redesign. The output is the same decision log. The process takes weeks instead of months.

Humans approve. Quorum is an executive committee in software, not an autonomous one. The agents prepare, deliberate, and recommend. Leadership signs.

ARCHITECTURE

Agents on top. Real tooling underneath.

LAYER ONE · DECISION

Functional Brains

One agent per functional area, holding its priorities, constraints, and institutional context. Agents convene quorums to reconcile cross-functional decisions and present recommendations to leadership.

- Finance
- IT
- HR
- R&D
- Operations
- Legal & Compliance
- Sales & GTM

LAYER TWO · ANALYTICAL

Proprietary Tooling

The analytical layer the agents operate on. This is where Quorum becomes a moat rather than a wrapper. Each tool ingests real enterprise data and returns structured outputs the agents reason against.

- System & App Discovery
- Contract Reconciliation
- Org & Comp Mapping
- Synergy Modeling
- Headcount Optimization
- Process Diffing
- Decision Provenance

WEDGE & LONG GAME

The integration is the wedge. The brain is the company.

YEAR ONE · WEDGE

Post-Merger Integration

Sold to mid-market acquirers and PE roll-ups. Replaces or augments the post-close consulting workstream. Faster integration, lower fees, complete decision log.

\$2–5M consulting spend per deal. Recurring across portfolios.

YEAR THREE+ · PLATFORM

The Organizational Brain

Post-close, the agents stay on. The same committee that ran the integration runs the next reorg, the next divestiture, the next strategic decision.

The standing executive layer for serial acquirers. Renewing forever.

PMI is a recurring problem for serial acquirers (PE platforms, F1000 corp dev teams), which makes it the right entry point for a permanent product. Every deal is another integration. Every integration leaves behind a smarter, deeper brain.

WHY NOW

Three forces converge.

I.

Agents finally work for real workflows

Production-grade tool use, long-context reasoning, and multi-agent orchestration crossed the reliability threshold for high-stakes enterprise decisioning in the last 18 months. M&A integration is exactly the kind of structured, multi-stakeholder workflow this generation of models can handle.

II.

The consulting majors are running the same play

BCG X launched PMI Ignite this quarter. Accenture published its agentic-PMI thesis in late 2025. Every Big Four firm is spinning up internal AI labs targeting the same workflow. The market has been validated by the incumbents — and we've worked inside one of them.

III.

M&A volume returning to peak

Global M&A surged 41% year-over-year in 2025 to a near-record high. North America alone closed \$2.65 trillion in deal value. PE platforms continue running roll-up strategies that produce a steady cadence of integrations. The flow of work is structural, not cyclical.

TOTAL ADDRESSABLE MARKET

A multi-billion-dollar professional services pool.

\$8.9B

Global PMI services market, 2025

Growing at 10% CAGR; \$13B+ projected by 2029.

\$26B

Corporate M&A consulting services, 2025

Including strategy, integration, and HR M&A practices.

24,000+

M&A consulting engagements per year, globally

PMI workstreams are a recurring component of most.

\$2.65T

North American M&A deal value, 2025

Second-highest year on record. Each closed deal seeds an integration.

The wedge inside the wedge.

We don't need the full \$8.9B PMI market to build a generational company. We need a defensible share of mid-market deals between \$50M and \$500M — the segment that can't afford BCG but is too complex for spreadsheets.

That segment alone produces thousands of integrations a year across PE platforms and corporate acquirers.

Every Big Four firm runs a PMI practice. Quorum is the product version of that practice.

LANDSCAPE

The field is real. The middle is open.

PLAYER	WHAT THEY OFFER	WHY WE WIN	SEGMENT
BCG X · PMI Ignite	AI-enabled integration planning, delivered through BCG's M&A practice. Strong consulting-led distribution.	BCG sells to the F500. Their software is a wedge for partner engagements, not a standalone product.	Enterprise / Mega-deals
Accenture, Big Four labs	Internal agentic tools, often white-labeled into client engagements. Most still in pilot.	Captive to the consulting business model. Higher unit economics than a software product allows.	Enterprise / Mega-deals
Midaxo, DealRoom, Devensoft	Workflow and project management for M&A. Increasingly bolting AI on top of existing platforms.	Glorified Smartsheet. Manage tasks; don't make decisions. No analytical layer underneath.	Corp Dev / Mid-Market
Hebbia, generalist agent platforms	Document-heavy agentic workflows for finance and M&A diligence. Horizontal positioning.	Strong in diligence. Not built for the operational reality of post-close integration.	Investment Banking
Quorum	Agents that make decisions, sitting on proprietary analytical tooling, sold direct to mid-market acquirers.	Product-first economics. Built from inside a top-tier M&A practice. Persistent post-close.	Mid-Market & PE Roll-Ups

BUILDERS

Two M&A operators. One systems builder.

Morgan Whitelaw

CEO · PRODUCT & GTM

Four years at EY-Parthenon. Spent the past year embedded in EY-P's Buy & Integrate practice as a product manager in the AI Innovation Lab, specifically to learn how to replace its workflows with agentic tools. Shipped a B&I planning suite (operating models, roadmaps, interdependencies) and a full-business headcount optimization platform. Worked on Broadcom's \$69B acquisition of VMware and several Microsoft acquisitions.

Previously co-founder, JanitorAI (\$3M raised) · Sonoma State

Annika Syverson

CTO · ANALYTICAL STACK

UC Berkeley-trained data scientist with four years of M&A experience spanning dozens of integrations across technology, industrials, and healthcare. Designed and shipped ValueQ, an agentic suite that automates the analytical workflows valuation professionals run on every deal. ValueQ is in production with EY-P valuation teams today.

EY-Parthenon, AI Innovation Lab · UC Berkeley

Kyle Krowpman

ML INFRASTRUCTURE

Particle physicist by training, specializing in data analysis and applied machine learning. Currently an Applied Scientist at Amazon, building ML systems for large-scale fraud detection. During his PhD worked on the ATLAS experiment at CERN's LHC, analyzing multi-terabyte datasets inside a collaboration of several thousand physicists. Expert in Python and Rust.

Applied Scientist, Amazon · PhD Physics, Michigan State

Annika and Morgan met working Broadcom-VMware at EY-P, then moved into the AI Innovation Lab together. Quorum is the productized version of what they built there.

PRE-SEED ROUND

Raising to incorporate, poach, and ship.

\$1M

Pre-seed, twelve-month runway

Funds the full founding team going full-time, two strategic hires from Big Four B&I practices, one additional engineer, and first design-partner deployments. Bridge to a priced seed round on shipped product.

What the money does

- I. **Three founders full-time.** Incorporate, pay ourselves, and bring Annika and Kyle off their current employers within 60 days of close.
- II. **Two B&I poaches.** Senior consultants from the integration practices of EY-P, Accenture, or BCG. Domain depth that compounds with our product.
- III. **One additional engineer.** A second full-stack or ML engineer to accelerate the analytical layer build.
- IV. **Design partner deployments.** Two to three paid pilots with PE platforms or serial corporate acquirers in our network. Revenue and reference customers by month nine.

C O D A ———

Every large company has a permanent committee that reconciles competing priorities in a room.

We are building the AI version.
